

Subject: Science

These are the objectives a student on each Pathway needs to achieve by the end of year 7, to ensure they are making expected progress:

	Objective 1: Develop scientific knowledge and understanding.	Objective 2: Develop understanding of the processes and methods through scientific enquiry.	Objective 3: Understand the implications of science by drawing on evidence and through evaluation.
Exceptional performance	<p>Analyse scientific processes and phenomena using relevant and specific detail with accurate spelling and grammar in a sustained way.</p> <p>Compare benefits and risks of scientific developments in different economic, social or cultural contexts, and how these decisions may be influenced by different people.</p> <p>Use a range of appropriate scientific and mathematical conventions to communicate ideas, using correct units for a range of measurements.</p>	<p>Justify appropriate formats for presenting quantitative and qualitative scientific data that is appropriate to the purpose of the communication.</p> <p>Explain abstract scientific processes and phenomena using ideas and models; make secure connections between abstract ideas and/or models.</p> <p>Test hypotheses on their own to carry out investigations including being able to recognise all significant variables (including dependent, independent and control), explain why particular pieces of equipment are appropriate, collect repeated readings at suitable ranges and intervals and produce risk assessments that consult appropriate resources.</p>	<p>Interpret data in a variety of formats and provide detailed, accurate explanations for inconsistencies.</p> <p>Draw valid conclusions that utilise more than one piece of relevant evidence, supported using scientific knowledge and evaluate the quality of their data by identifying strengths and limitations..</p>
Pathway 1	<p>Explain scientific processes and phenomena using relevant and specific detail with accurate spelling and grammar.</p> <p>Explain arguments for and against the use of scientific developments in different economic, social or cultural contexts.</p> <p>Use a range of appropriate scientific and mathematical conventions to communicate ideas.</p>	<p>Select appropriate formats for presenting quantitative and qualitative scientific data that is appropriate to the purpose of the communication.</p> <p>Explain scientific processes and phenomena using ideas and models, make simple connections between ideas and/or models.</p> <p>Plan and carry out investigations from a given hypothesis, being able to recognise all significant variables (including dependent, independent and control), explain why particular pieces of equipment are appropriate, collect repeated readings at suitable ranges and intervals and produce risk assessments that consult appropriate resources.</p>	<p>Interpret data in a variety of formats and provide accurate explanations for inconsistencies.</p> <p>Draw conclusions that utilise more than one piece of evidence, and how to resolve errors in data through improvements to methods. .</p>

KS3 Assessment – Year 7 Progress Grid

Pathway 2	<p>Describe scientific processes and phenomena using some specific detail with mostly accurate spelling and grammar</p> <p>Describe different viewpoints people may have about scientific developments and identify ethical and moral issues.</p> <p>Use a range of scientific and mathematical conventions to communicate ideas.</p>	<p>Decide on appropriate formats for presenting scientific data.</p> <p>Describe scientific processes and phenomena using ideas and models.</p> <p>Plan with support, and carry out investigations including being able to recognise significant variables, describe why particular pieces of equipment are appropriate, collect repeated readings at suitable ranges and intervals and suggest how to control obvious risks during a range of practical situations.</p>	<p>Describe data in a variety of formats and provide possible explanations for inconsistencies.</p> <p>Draw conclusions that are consistent with data and describe ways to improve a method.</p>
Pathway 3	<p>Identify simple scientific processes and phenomena.</p> <p>State simple positive and negative consequences about scientific developments.</p> <p>Use some simple scientific and mathematical conventions to communicate ideas.</p> <p>At the bottom of the pathway, there may be some errors and misconceptions evident</p>	<p>Identify appropriate formats for presenting simple scientific data such as tables and bar charts</p> <p>Recall simple scientific processes and phenomena using scientific ideas and models.</p> <p>Carry out investigations with support, including being able to identify some significant variables, select some appropriate equipment, collect readings identifying the ranges and intervals and identify obvious risks during basic practical situations.</p> <p>At the bottom of the pathway, there may be some errors and misconceptions evident, and students may require prompting and support to achieve the objectives.</p>	<p>Identify patterns and inconsistencies in data.</p> <p>Identify a basic conclusion and methodology that could have caused errors.</p>
